Professional Summary

Motivated and results-driven Information Technology undergraduate and Full Stack Developer with hands-on industry experience across React.js, TypeScript, Laravel, Spring Boot, and .NET ecosystems. Proven track record of taking projects from Figma UI/UX design through development to production deployment. Skilled in building scalable web applications, integrating REST APIs, and delivering AI-powered and IoT-based solutions using Python, TensorFlow, and Flask. Experienced in cross-platform mobile development with Flutter. Strong problem-solver with excellent analytical thinking, Agile collaboration skills, and a passion for building intelligent, real-world software solutions.

Education

Sri Lanka Institute of Information Technology (SLIIT)

2022 – Present

B.Sc. (Hons) in Information Technology – Expected Graduation 2026

Chavakachcheri Hindu College

2020

G.C.E. Advanced Level – Physical Science Stream

Experience

Full Stack Engineer Intern

Jan 2025 – Sep 2025

Navicode

- Delivered a complete **ERP System** end-to-end – designed the full UI/UX in Figma, developed the frontend and backend, and deployed the application to production for a startup client.
- Built and deployed a full-stack **photography portfolio website** using React.js on the frontend with a Laravel and MongoDB backend for content and media management.
- Developed a **local client project** using the .NET framework, delivering a stable, production-ready business solution.
- Designed user-friendly, responsive interfaces using Figma and translated them into pixel-accurate React.js components.
- Built and maintained REST APIs and backend services powering multiple client applications.
- Worked extensively with relational and NoSQL databases, performing data modelling and analysis to support application features.
- Followed Agile development practices and used Git for version control across all projects.

Software Engineer Intern

Nov 2025 – Feb 2026

Teceze

- Developed the **Field Techy** and **Trincos** e-commerce platforms, building responsive frontends with TypeScript and React.js and robust backend services using Spring Boot (Java) and SQL.
- Designed and consumed REST APIs connecting the TypeScript frontend with Java/Spring Boot backend services, ensuring reliable data flow across both platforms.
- Managed version control using Git/GitHub across multi-developer teams, resolving merge conflicts and maintaining clean branch history.
- Performed manual testing and bug fixing across both platforms to ensure system reliability and a smooth end-user experience.

Software Engineer Junior

Freelance

D-GateWay

- Developed e-commerce platforms including **Field Techy** and **Trincos** systems, building responsive applications using React.js and TypeScript.
- Integrated third-party APIs and managed version control using Git/GitHub throughout the development lifecycle.
- Performed manual testing and bug fixing to ensure system reliability and stability.

Freelance Full Stack Developer

Jan 2024 – Present

Independent Projects

- Developed a **Vehicle Sales Management System** with separate client and admin panels, including a Price Calculator App and Car Listing Platform.
- Built responsive web applications using React.js and TypeScript, with full API integration and vehicle management features.
- Improved application performance, debugging, and stability through iterative UI enhancements.
- Tech stack: React.js, TypeScript, Git/GitHub.

Projects

Final Year Project – AI Pest Prediction System | *Python, Flask API, TensorFlow, IoT, React.js, TypeScript*

- Built an AI-powered pest detection and prediction system combining IoT sensor data with image-based analysis for real-time crop protection.
- Trained and deployed Random Forest and CNN models for pest prediction and image-based pest identification from crop and pest images.
- Developed a Python Flask API to serve the ML models, exposing real-time prediction endpoints consumed by a React.js/TypeScript web application.
- Collected real-time environmental data (temperature, pressure, light) using ESP32, BMP280, and LDR sensors, feeding live data into the prediction pipeline.

ERP System for Startup Company | *Figma, React.js, Laravel, MongoDB*

- Designed the complete UI/UX in Figma and developed the system end-to-end, from requirements gathering to deployment.
- Built a React.js frontend integrated with a Laravel backend and MongoDB database.

Hotel Management System | *MERN Stack, MongoDB*

- Built an employee management system using the MERN stack with MongoDB as the primary database.

Online Food Order System | *PHP*

- Developed a web application with integrated payment functionality using PHP.

Online Customer Care System | *Java, MongoDB*

- Built a CRM system using Java and MongoDB to manage customer interactions and support tickets.

Mobile Applications | *Flutter, Android, SQLite*

- Developed cross-platform mobile applications using **Flutter**, alongside native Android projects.
- Built a Multi Math Quiz Game (Android) and a TODO App using SQLite for local data storage.

Technical Skills

Programming: Python, Java, C++, .NET, Angular, Kotlin, Dart

Web: HTML, CSS, JavaScript, TypeScript, PHP, MERN Stack, Laravel, React.js, Spring Boot

Mobile: Flutter, Android (Java/Kotlin), SQLite

AI / Machine Learning: Python, TensorFlow, Flask API, Random Forest, CNN, IoT Integration (ESP32, BMP280, LDR)

Databases: MongoDB, SQL Server, SQLite, SQL

Tools: Git, GitHub, Figma, Power BI, R Studio, Android Studio

Cloud: Firebase, AWS (Basics)

Certifications

Web Design – University of Moratuwa

JavaScript Specialist – Developers Stack Academy

Data Structures and Algorithms Bootcamp (Python)

Soft Skills

Teamwork, Communication, Problem Solving, Time Management, Analytical Thinking
