

Pavithiran Thevarasa

Full Stack Software Engineer

+94 76 2973 456 | thevarasapavi@gmail.com | Jaffna, Sri Lanka

Portfolio — GitHub — LinkedIn

Professional Summary

Motivated IT undergraduate and Full Stack Developer with hands-on experience in React.js, TypeScript, Laravel, Spring Boot, and .NET. Proven track record of delivering projects from Figma UI/UX prototyping through end-to-end production deployment. Skilled in integrating secure REST APIs, cross-platform Flutter mobile applications, and AI/IoT solutions using Python and TensorFlow. A strong Agile collaborator focused on building highly optimized, intelligent software architectures.

Education

Sri Lanka Institute of Information Technology (SLIIT) 2022 – 2026 (Degree Completed)
B.Sc. (Hons) in Information Technology (IT) – Expected Graduation September 2026

Chavakachcheri Hindu College 2020
G.C.E. Advanced Level – Physical Science Stream

Experience

Full Stack Engineer Intern – Navicode Jan 2025 – Sep 2025

- Delivered a startup **ERP System** end-to-end, managing full Figma UI/UX design, full-stack development, and deployment.
- Built a full-stack **photography website** using React.js with a Laravel and MongoDB backend for media management.
- Developed a stable, production-ready **local business solution** utilizing the .NET framework.
- Designed responsive interfaces in Figma and translated them directly into React.js components.
- Built and maintained secure REST APIs and backend services powering multiple production client applications.
- Executed database data modelling and analysis across relational and NoSQL systems to support features.
- Followed Agile development workflows and utilized Git/GitHub for version control across engineering tracks.

Full Stack Engineer Intern – Teceze Nov 2025 – Feb 2026

- Built **Field Techy** and **Trincos** e-commerce platforms using TypeScript/React.js frontends and Spring Boot/SQL backends.
- Designed and consumed REST APIs connecting TypeScript frontends with Spring Boot backends for reliable data flows.
- Managed project repositories with Git/GitHub, resolving complex merge conflicts and maintaining clean history.
- Performed functional testing and cross-platform bug fixing across web and mobile to boost reliability.

Freelance Full Stack Developer Jan 2024 – Present

Independent Projects

- Developed a **Vehicle Sales Management System** featuring dedicated client/admin panels, a calculator app, and listings.
- Built responsive web applications using React.js and TypeScript, complete with end-to-end vehicle management APIs.
- Optimized web application speed, error handling, and component stability through iterative interface enhancements.
- Tech stack: React.js, TypeScript, Git/GitHub.

Projects

Final Year Project – AI Pest Prediction System | *Python, Flask API, TensorFlow, IoT, React.js*

- Built an AI-powered pest detection and prediction system combining IoT sensor data with image-based analysis for real-time crop protection.
- Trained and deployed Random Forest and CNN models for pest prediction and image-based pest identification from crop and pest images.
- Developed a Python Flask API to serve the ML models, exposing real-time prediction endpoints consumed by a React.js/TypeScript web application.
- Collected real-time environmental data (temperature, pressure, light) using ESP32, BMP280, and LDR sensors, feeding live data into the prediction pipeline.

ERP System for Startup Company | *Figma, React.js, Laravel, MongoDB*

- Designed the complete UI/UX in Figma and developed the system end-to-end, from requirements gathering to deployment.
- Built a React.js frontend integrated with a Laravel backend and MongoDB database.

Weekly-Report-Generator-Team-Dashboard | *Angular, TypeScript, REST APIs*

- Developed structured single-page applications using Angular components, architectural services, and modular routing protocols.

Hotel Management System | *MERN Stack, MongoDB*

- Built an employee management system using the MERN stack with MongoDB as the primary database.

Online Food Order System | *PHP*

- Developed a web application with integrated payment functionality using PHP.

Online Customer Care System | *Java, MongoDB*

- Built a CRM system using Java and MongoDB to manage customer interactions and support tickets.

Mobile Applications | *Flutter, Android, SQLite*

- Developed cross-platform mobile applications using **Flutter**, alongside native Android projects.
- Built a Multi Math Quiz Game (Android) and a TODO App using SQLite for local data storage.

Technical Skills

Programming Languages: Python, Java, C#, C++, JavaScript, TypeScript, PHP, Kotlin, Dart

Frontend & Backend: React.js, Angular, HTML5, CSS3, Laravel, Spring Boot, .NET, Flask API, REST APIs

Mobile Development: Flutter, Android (Java/Kotlin), SQLite

AI & IoT: Machine Learning, TensorFlow, CNN, Random Forest, Flask API, IoT (ESP32, BMP280, LDR)

Databases & Tools: MongoDB, MySQL, SQL Server, SQLite, Git, GitHub, Figma, Power BI

Cloud & Environment: Firebase, AWS (Basics), Android Studio, R Studio

Certifications

Web Design – University of Moratuwa | JavaScript Specialist – Developers Stack Academy

Data Structures and Algorithms Bootcamp (Python)

Languages

English: Proficient | **Tamil:** Fluent | **Sinhala:** Basic
